

WEBINAR

Fertilizing with Urine:

Recent Findings from the Rich Earth Institute's On-Farm Research

Monday, March 18, 11 am - 12 pm

REGISTER

tinyurl.com/RichEarthWebinar

Join the Rich Earth Institute and three of its farmer partners for an update on recent on-farm research with urine fertilizer. Come to be part of the conversation about completing the food nutrient cycle in Vermont!

At this webinar, you can:

- Learn about the practicality and safety of urine nutrient reclamation, including pharmaceutical and PFAS considerations
- Gain insights from Rich Earth's twelve years of prior on-farm and lab research
- Hear directly from three of Rich Earth's recent farmer partners, exploring application methods for sweet corn and nut tree seedlings
- Explore findings from our social research with farmer partners, buyers, and consumers
- Engage in a lively discussion and contribute to shaping our forthcoming Farmer Guide to Urine Fertilizer

About The Rich Earth Institute

The Rich Earth Institute advances the practice of peecycling: reclaiming "waste" as a resource to complete the food nutrient cycle. Human urine contains vital nutrients for growing crops. By reclaiming urine as an agricultural resource, communities can prevent downstream pollution, access a local fertilizer, and conserve clean water. For over a decade, the Rich Earth Institute has operated the nation's first and largest community-scale peecycling program. Learn more at www.richearthinstitute.org
